I'm a full-stack engineer focused on building reliable systems and polished interfaces. I'm highly responsible, self-disciplined, and results-driven, with a natural leadership style that helps teams stay aligned and deliver. I adapt quickly, stay calm under pressure, and enjoy solving tough problems until they're done right.

TECHNOLOGIES AND LANGUAGES

- Frontend React, React Native, Next.js, JavaScript, TypeScript, SCSS, Tailwind CSS, Framer Motion, Three.js, React Three Fiber, Angular
- Backend .NET, Node.js, REST APIs, Go, Express, C, C++
- Database Microsoft SQL Server, MongoDB, MongoDB Atlas, Prisma, Firebase, PostgreSQL
- Cloud Google Cloud, AWS
- Tools & DevOps Git, GitHub Desktop, Jenkins, CI/CD, Docker, VS Code

EDUCATION

- **King Mongkut's University of Technology Thonburi, Thailand**
M.B.A. (Entrepreneurship / Entrepreneurial Studies), TH. 2024–Present (Expected May 2027)
Courses: Entrepreneurship, Innovation Management, Product Leadership
- **King Mongkut's University of Technology Thonburi, Thailand**
B.Eng. Computer Engineering, TH. 2022–May 2026 (GPAX 3.5)
Courses: Basic Computer Programming, Data Structure, Algorithm, Database Management, Software Engineering

WORK EXPERIENCE

Full Stack Developer (Intern) **IRPC Public Company Limited** **Jun 2025-Aug 2025**

- Developed an internal web application using Angular and .NET to streamline team workflows.
- Implemented Jenkins-based CI/CD pipelines so builds and releases could run automatically.
- Communicated technical concepts to both technical and non-technical partners while debugging and refactoring code.
- Designed the database foundation and optimized queries on Microsoft SQL Server to keep data reliable and fast.

PROJECTS

- **Cinema Ticket Booking System (Fullstack)** - *Vue 3 • TypeScript • Go • Gin • MongoDB • Redis • WebSocket • Docker*
Built a full-stack cinema ticket booking platform with real-time WebSocket seat maps, Redis-backed checkout holds, and digital QR tickets. Customers browse showtimes, hold seats with live updates, confirm bookings with idempotency and distributed locking, and receive localized confirmation emails. Includes admin dashboard for catalog management, booking search, audit/email logs, and QR ticket scanning. Bilingual EN/TH UI with Google OAuth and Docker Compose deployment.
[Demo](#)
- **SpaceShare (Project Management)** - *Go • PostgreSQL • Redis • Expo (React Native) • Next.js • TypeScript • Tailwind CSS*
Led product delivery for SpaceShare, a pre-launch two-sided logistics marketplace connecting B2B shippers with inter-province drivers on planned routes. Owned end-to-end project scope and feature design for the driver-selected delivery workflow, aligned stakeholders on requirements and constraints, translated business context into clear specs/user flows, prioritized roadmap and backlog, and coordinated execution across API, mobile (driver), and web (company/admin) surfaces.
- **My-Portfolio (Frontend)** - *Next.js 16 • TypeScript • Tailwind CSS • Framer Motion • Three.js*
An interactive, fully responsive personal portfolio that blends polished UI animation with 3D visuals, highlights featured projects and skills, and provides resume access.
- **Figure Shop (Fullstack)** - *Node.js • Express • MongoDB • Multer • EJS • Axios*
Architected a buy-and-sell marketplace for collectible figures with an Express REST API that handles catalog CRUD, image uploads, discounts, carts, orders, and payment metadata while running analytics aggregations for best-selling categories and customer spending; the EJS frontend consumes the APIs via Axios to deliver an admin-ready dashboard and storefront.
- **Another Story Another Legacy (ASAL) (Backend)** - *Unity • C# • Firebase Realtime DB • Firebase Auth • Backend services*
Owned the online TTRPG platform's backend by designing Firebase Realtime Database schemas for characters, inventories, and maps while building C# services that sync gameplay data, and enforce secure account authentication so Dungeon Masters and players can collaborate live.
- **Wi-Fi Authentication Attack Simulator (Cybersecurity)** - *Kali Linux • Bash • Aircrack-ng • Hashcat • Flask • Python*
Built an educational red-team toolkit that automates WPA/WPA2 handshake capture, deauthentication workflows, Hashcat cracking pipelines, and Evil Twin captive portals with a Flask credential collector, focusing on ethical Wi-Fi security research and hardening recommendations.
